VOLUME 44–45 SPECIAL ISSUE

COMMINUTION

edited by

K.S.E. Forssberg
Division of Mineral Processing, Luleå University of Technology, S-971 87, Luleå, Sweden

and

K. Schönert
Technische Universität Clausthal, Inst. für Aufbereitung und Verdelung, Walther-Nernst-Strasse 9, Clausthal-Zellerfeld, D-3392 Germany

CONTENTS

Preface ix
The influence of particle bed configurations and confinements on particle breakage
K. Schönert 1
Flow behaviour of concentrated suspensions: predictions and measurements
J. Mewis 17
Developments in wet classifiers
K.G.H. Heiskanen 29
Microscale fracture measurements with application to comminution
S. Middlemiss and R.P. King 43
Vibration signal emission from mono-size particle breakage
Y. Zeng and K.S.E. Forssberg 59
The temperature and the infrared luminescence of the uvenil fracture surface of glassy polymer
L.S. Zarkhin, O.V. Chikunov and D.A. Salimonenko 71
High velocity impact of particles on a target — an experimental study
M. Mebtoul, J.F. Large and P. Guigon 77
Chemically assisted dry comminution of sericite — dry comminution method accompanied by ion-exchange
F. Ikazaki, K. Uchida, K. Kamiya, A. Kawai, A. Gotoh and E. Akiba 93
Modelling of interparticle breakage
J. Liu and K. Schönert 101
Comminution of porous materials
P. Bevilacqua and G. Ferrara 117
Some industrial experiences in modifying fine grinding environments for improved downstream product performance
R.R. Klimpel 133
Liberation of composite waste from manufactured products
K. Loehr and M. Melchiorre 143
Rheological characterization of mineral suspensions using a vibrating sphere and a rotational viscometer
S.K. Kawatra, A.K. Bakshi and T.E. Miller Jr. 155
Mechano-chemical reaction of metallurgical grade silicon with gaseous hydrogenchloride in a vibration mill
S. Bade, U. Hoffmann and K. Schönert 167
Interrelation between fine grinding and mechanical activation
V.V. Boldyrev, S.V. Pavlov and E.L. Goldberg 181
Grinding of mixture under mild condition for mechanochemical complexation
M. Senna 187

Reactivity of mechanically activated chalcopyrite
K. Tkáčová and P. Baláž 197
Financial implications of comminution system optimization
J.A. Herbst and Y.C. Lo 209
Modelling the new LKAB Kiruna concentrator with USIM PAC
P. Söderman, U. Storeng, P.O. Samskog, O. Guyot and A. Broussaud 223
Solution approaches to the dynamic population balance modeling of a closed grinding network
M.C. Williams, T.P. Meloy and M. Tarshan 237
Computer aided grinding circuit optimisation utilising a new mill efficiency curve
D. Espig and V. Reinsch 249
The development of laboratory testing for autogenous grinding
P. Mörsky, M. Klemetti, T. Knuutinen, R. Kalapudas and P. Koivistoinen 261
The use of data from small-scale mills and computer simulation techniques for scale-up and design of SAG mill circuits
I.B. Klymowsky and A.L.M. Rijkers 273
Modelling and simulation of large diameter autogeneous and semi-autogeneous mills
S. Morrell, W.M. Finch, T. Kojovic and H. Delboni Jr. 289
Wear in high-speed impact mills
H. Uuemõis, H. Kangur and I. Veerus 301
Spiral jet mills: hold up and scale up
F. Müller, R. Polke and G. Schädel 315
Development of a new jet mill for very fine mineral grinding
G. Alfano, P. Saba and M. Surracco 327
Supervisory control of autogenous grinding circuits
M. Borell, P.-O. Bäckström and L. Söderberg 337
A mechanistic state equation model for semiautogenous mills
R. Amestica, G.D. Gonzalez, J. Menacho and J. Barria 349
Ultrafine grinding in an air-swept ball mill circuit
J. Kolacz and K.L. Sandvik 361
Characterization of laboratory-scale tumbling mills
H.J. Steiner 373
The measurement of forces exerted by the load on liners in rotary mills (wet and dry)
M.H. Moys, I. Smit and W. Stange 383
Grinding technical questions of producing composite cement
L. Opoczky 395
An industrial application of mutlivariable linear quadratic control to a cement mill
V. van Breusegem, L. Chen, G. Bastin, V. Wertz, V. Werbrouck and C. de Pierpont 405
Simulation of ball behavior in a vibration mill in relation with its grinding rate: effects of fractional ball filling and liquid viscosity
T. Yokoyama, K. Tamura, H. Usui and G. Jimbo 413
Grinding mechanism of centrifugal mills — a simulation study based on the discrete element method
T. Inoue and K. Okaya 425
The outer mechanics of the eccentric vibration mill
W. Beenken, E. Gock and K.-E. Kurrer 437
Optimization of stone-quarry technologies
B. Csöke, S. Pethõ, J. Földesi, L. and Mészáros 447
New comminution applications using hydrocone crushers with setting regulation in real time
A. Svensson, P. Hedvall and M. Fjæstad 461
Technology improvements of crushing process in Majdanpek Copper Mine
M.M. Grujić 471
Ultra fine grinding in a two stage rotor impact mill
R. Drögemeier and K. Leschonski 485

Dynamic modeling of a closed loop jet mill
H.J.C. Gommeren, D.A. Heitzmann, H.J.M. Kramer, K. Heiskanen and B. Scarlett 497
Performance of a fluidized bed jet mill as a function of operating parameters
M. Benz, H. Herold and B. Ulfik 507
Confined particle bed comminution under compressive loads
D.W. Fuerstenau, O. Gutsche and P.C. Kapur 521
Product size distribution and energy expenditure in grinding minerals and ores in high pressure rolls
I.L. Lim, W. Voigt and K.R. Weller 539
Wear protection of surfaces from high pressure grinding rolls: possibilities and limits
G. Oberheuser 561
Component wear in vertical spindle mills grinding coal
J. Sligar 569
Grinding of waste paper and rice hulls with the Szego Mill for use as plastics fillers
T. Mölder and O. Trass 583
A new grinding process: HOROMILL
A. Cordonnier 597
Investigation of the grind limit in stirred-media milling
H. Cho, M.A. Waters and R. Hogg 607
Energy distribution and particle trajectories in a grinding chamber of a stirred ball mill
L. Blecher and J. Schwedes 617
Investigations into the process dynamic and control of a laboratory agitator bead mill
P. Bernhardt 629
Power predictions for a pilot scale stirred ball mill
M.-W. Gao, K.S.E. Forssberg and K.R. Weller 641
Validation of a model of a stirred bead mill by comparing results obtained in batch and continuous mode grinding
H. Berthiaux, D. Heitzmann and J.A. Dodds 653
Dimensioning a forced movement wet grinder with a Mac Cabe and Thiele construction
L. Clerc, M. Ouammou and A. Benhassaine 663
Kinetics of comminution in micro- and sub-micrometer ranges
J. Stražišar and F. Runovc 673
Use of grinding and liberation models to simulate tower mill circuit performance in a lead/zinc concentrator to increase flotation recovery
K.R. Weller, S. Morrell and P. Gottlieb 683
Some considerations regarding optimum flow fields for centrifugal air classification
S.T. Johansen and S.R. de Silva 703
CFS–HD: A new classifier for fine classification with high efficiency
R. Nied 723
Grinding circuit for fine particles in liquid suspensions with a new counter-flow centrifugal classifier
G. Bickert, W. Stahl, R. Bartsch, F. and Müller 733
Air core and roping in hydrocyclones
F. Concha, A. Barrientos, J. Montero, R. and Sampaio 743
